A Cut Above the Rest

The Jawz Endomyocardial Biopsy Forceps are precisely designed to provide a cleanly cut specimen each and every time.

Jawz™

Precision

- Forceps were developed by physicians and designed to reliably deliver cleanly cut specimens
- Two stainless steel symmetrical hinged cutting jaws allow superior surface alignment
- Precise cutting jaws remain sharp throughout the procedure

Control

- Central ring of the handle rotates to accommodate any hand position
- Instrument design offers control of bite force for accuracy
- Three-ring handle maintains desired thumb position while being removed

Flexibility

- Straight, Pre-Curved or Maxi-Curved configurations to provide optimal access
- Formable and Non-Formable options to suit your technique
- Stainless Steel or FEP coated
- Multiple lengths available for different access points
